

Don't Wait. Build Now.

Validate your AI concept—fast, focused, and with minimal investment.

What is Rapid Prototyping?

At New Resources Consulting (NRC), Rapid Prototyping is a time-bound, real-data approach to quickly test an AI concept. Withing 8-24 hours, we build a working prototype designed to answer one key question:

Is this idea viable and worth pursuing?

- Fast, low-risk entry point into AI
- Real results without heavy integration or full data migration
- Insight you can act on immediately

Why Choose Rapid Prototyping?

- ✓ **Speed:** See working results within one business day.
- ✓ **Low Investment:** Minimize costs and risks before scaling.
- ✓ **Clarity:** Know what's working, and what isn't, before committing resources.
- ✓ **Flexibility:** Stay agile, whether scaling the idea or shifting directions.

Our Proven Process

Rapid Prototyping isn't just about getting a quick win. It's about setting the stage for successful AI adoption that aligns with your business reality.

01 Select a Representative Data
Identify a small, targeted sample group of your data. Enough to validate the outcome without major disruption.

02 Apply Targeted AI Capabilities
Run the sample data through the right AI tools (speech-to-text, summarization, classification, prediction) depending on the goal.

03 Evaluate Results & Feasibility
Review outputs for accuracy, relevance, and scalability.

04 Determine the Best Next Step
Based on real results, NRC can help you:

- Advance to full Proof of Concept or Minimum Viable Product
- Refine the prototype with updated parameters
- Pivot if a better platform, technology, or approach is identified.
